Professional Experience

- July 2014 - June 2017 **Software engineer** at FÖRETAGSPLATSEN: full-stack engineer, UX & UI
- Front-end development
JavaScript development (ES5/ES6), client-side architecture, UX & UI design (Less/CSS, SVG icons). Unit testing is an important part of the development process, we are using Jasmine for JavaScript testing (through Karma).
 - Backend development
Backend in C#, using the MVP framework for REST API handling. The server fetches the data from a CouchDB database. We use NUnit on the server-side for unit testing.
 - CI & DevOps
Experience with automated testing via TeamCity. Automatic deployment on Microsoft Azure using Ansible.
- July - August 2013 **Scientific engineer** at INRIA (RMoD): redesign of the Pharo Smalltalk IDE
- Responsible for the refactoring of the legacy "Morphic UI" framework.
 - Implementation of Spec: a UI-generation framework.
 - Development of a fully-featured IDE solution for Pharo.
- June 2013 - June 2014 **Software engineer consultant** at FÖRETAGSPLATSEN
- Development of a new major release of the web application: technical migration from a template-based server-side application to a component-based JavaScript single-page application.
 - Development of a cloud-based document archive application *à la* Dropbox for accounting agencies.
- June - August 2013 **Software engineer** Student program of the GOOGLE SUMMER OF CODE
Improvement of Spec: decoupling the models from the UI framework for better extensibility.
- March 2013 **Young Engineer** at INRIA (RMoD): UI framework development
- Implementation of new UI widgets (in Morphic).
 - Refactoring of the legacy UI codebase.

- August 2012 **Head of the Student volunteer program** at International Smalltalk conference
 Coordination of the students and the well-being of the attendees at the *20th International Smalltalk Conference*.
- August 2012 **First author** of *A Framework for the Specification and Reuse of UIs and their Models*
 Publication of the article *A Framework for the Specification and Reuse of UIs and their Models* by Benjamin VAN RYSEGHEM, Stéphane DUCASSE, and Johan FABRY at IWST '12.
- May - August 2012 **Software engineer** Student program of the GOOGLE SUMMER OF CODE
 Implementation the *Traits support in Nautilus*, the new default Pharo IDE I previously developed.
- July - August 2012 **Young engineer** at INRIA ([RMod](#)): Refactor and improve widgets
 Improvement of widgets and the development of a widgets generation framework.
- Summer 2011 **Software engineer** Student program of the SUMMERTALK
 Improvement of the [Pharo](#) IDE toolset. The SummerTalk is an ESUG (European Smalltalk User Group) equivalent to the Google Summer of Code.

FLOSS Projects

- Pharo As a core maintainer of Pharo (an open source Smalltalk implementation), most of my Smalltalk projects have been integrated in the distribution. My other Smalltalk projects can be found on [Smalltalkhub](#).
- Following is a selection of FLOSS projects of which I am the author.
 Please see my [GitHub profile](#) for a more complete list.
- git-linter **git-linter** is a command line tool and a docker-based GitHub/Gitlab CI integration that lint git commit messages using project-defined rules. The code is distributed under the GPL 3.0 license.
- SandGlass **SandGlass** is an electron-based systray app used to track my working time. It provides a CLI for workflow integration and D3 based histograms of time per projects. The code is distributed under the GPL 3.0 license.
- great-things-done **Great Things Done** is a keyboard-centric GTD application based on Electron, and implemented in Clojure/ClojureScript. The front-end uses Reagent (an adaptor to React in CLJS), and implements some interesting features like a fully encrypted file-based database, global shortcut with OS X integrations, or Dock icon support. The code is distributed under the EPL 1.0 license.
- ergotron-firmware **ergotron** is a hand-made custom keyboard I built from scratch. The firmware is based on the excellent ergodox-firmware by Ben Blazak. The firmrware has been extended to support a lot more keys and LEDs, leading to a new hardware layout. The code is distributed under the MIT license.

Technical skills

Agile Programming Software Continuous Integration System	Remote working , Pair-programming, TDD, Getting Things Done, Scrum, Pomodoro JavaScript , Clojure, Smalltalk, JAVA, C, SQL, PROLOG, CAML, COBOL Git , WebStorm , GitHub , Gitlab, Slack, Upsource, TunnelBlick Travis CI, TeamCity, Jenkins GNU LINUX/UNIX, OS X, Microsoft Windows, AS400
--	---

Education

2012 - 2013	1st year of Master Informatique (Master in Computer Science) at the Université des Sciences et Technologies de Lille.
2011 - 2012	3rd year of Licence Informatique (Bachelor degree in Computer science) at the Université des Sciences et Technologies de Lille.
2009 - 2011	DUT Informatique (a 2 year technical degree in Computer Science) at the IUT A de Lille (major).
2005 - 2009	Classe Préparatoire aux Grandes Écoles (Higher School Preparatory Classes), Mathematics and Physics with Computer Science as option at Roosevelt and Clémenceau at Reims then 3rd year of Licence de Mathématiques Pures et Appliquées (Bachelor degree) at the Université des Sciences et Technologies de Lille.
2005	Graduation of a High School Diploma "Scientifique option Sciences de l'Ingénieur, spécialité Mathématiques" (Scientific highschool diploma, with an engineering sciences option and a Mathematic speciality) at Lycée Joliot-Curie at Romilly sur Seine.

Hobbies and interests

Sport	Rock climbing during 10 years, including 5 years at a competition level. Supervision of children (between 10 years old and 15 years old) during 2 years.
Cooking	I love to cook for my family and friends, and have a nice moment all together.
Movies	I love to watch movies, all kind of movies. I can't resist movies that are so bad they're good!
Mechanical keyboards	I spent a lot of time trying to find the ultimate keyboard. Until I made one myself.

Languages

French	Native language.
English	Primary language at work since 2008, both written and spoken.
